

CSS119 Project

Course name: Web design	Course code= CS 119
Course instructor: Abeer Alarainy	Deadline: 30-10-2023

General Information

- 1- This project is a group work, each group consists of 3 to 4 students.
- 2- The names of the students must be submitted to each group before the date (23 September 2023). It is preferable to attach an overview of the project topic, if specified.
- 3- This project is related to the course "Web design - cs 119", which covers the concepts of web design in the HTML language.
- 4- This project covers 15% of the total final grades for the course.
- 5- The projects will be presented and discussed with the course instructor in the last week of the semester (before the final exams).
- 6- A final project report must be generated and the file (cover and division of project contents) is followed in the project report document format.
- 7- The role of each student in the group and the tasks she worked on must be included in the project report.
- 8- The final project must be submitted as one compressed folder to blackboard

Project Description

The main purpose of this project is to create an integrated static website for one of the work environments (such as: restaurant, school, hospital, supermarket ... etc.) and the most important characteristics and specifications required for this website are:

- The project should consist of at least 4 pages (interconnected pages).
- The project should include fonts and color format.
- The project should include at least two of the following concepts (image, audio, video, links)
- The project should include a form to be filled out by the "visitor" user (example: contact us page form or site registration).
- The project should include at least one of the following concepts (table or list).
- The project should include CSS style
- Comments inside the code should be used to explain the idea.
